

Algebra of Quadratic Functions – Factoring

Math 2 Honors – Santowski

Math 2 Honors – Santowski 9/16/2009

1

Lesson Objectives

- ▶ (1) Review of Factoring trinomials
- ▶ (2) Develop the graphic significance of factors/roots
- ▶ (3) Solving Eqn (algebra/graphic connection)

Math 2 Honors – Santowski 9/16/2009

2

(A) Definition of Terms

- ▶ To **expand** means to write a product of expressions as a sum or difference of terms
- ▶ Ex. Expand $m(a + b) = (ma) + (mb)$
- ▶ Ex. Expand $(x + y)(a + b) = (xa) + (xb) + (ya) + (yb)$
- ▶ To **factor** means to write a sum or difference of terms as a product of expressions
- ▶ Ex. Factor $3x + 6 = (3)(x + 2)$
- ▶ Ex. Factor $x^2 - x - 2 = (x - 2)(x + 1)$
- ▶ The processes of expanding and factoring are **REVERSE** processes

Math 2 Honors – Santowski 9/16/2009

3

(B) Factoring Methods – Common Factoring

- ▶ Some expressions can be factored by looking for a common factor → usually the GCF
- ▶ (a) $2x + 8$ (b) $12x + 36$
- ▶ (c) $2x^2 + 8x$ (d) $2x^2y^2z + 8xyz^2$
- ▶ (e) $-2x - 8$ (f) $-2x + 8$
- ▶ (g) $2x - 8$ (h) $Ax + 4A$
- ▶ (i) $Ax^2 + 4Ax$ (j) $x(x - 6) + 2(x - 6)$
- ▶ (k) $y(4 - y) + 5(4 - y)$
- ▶ (l) $y(4 - y) + 5(y - 4)$

Math 2 Honors – Santowski 9/16/2009

4

(C) Factoring Methods – Simple Trinomials

- ▶ Simple trinomials (where $a = 1$) are the result of the expansion of multiplying 2 binomials, so when we factor the trinomial, we are working backward to find the 2 binomials that had been multiplied to produce the trinomial in the first place
- ▶ Ex. Expand $(x + 4)(x - 2) \rightarrow x^2 + 2x - 8$
- ▶ Ex. Factor $x^2 + 2x - 8 \rightarrow (x + 4)(x - 2)$

Math 2 Honors – Santowski 9/16/2009

5

(C) Factoring Methods – Simple Trinomials

- ▶ Factor the following trinomials:
 - ▶ (a) $x^2 + 5x + 6$
 - ▶ (b) $x^2 - x - 6$
 - ▶ (c) $x^2 + 3x + 2$
 - ▶ (d) $c^2 + 2c - 15$
 - ▶ (e) $3x^2 + 24x + 45$
 - ▶ (f) $2y^2 - 2y - 60$

Math 2 Honors – Santowski 9/16/2009

6

CONTEXT for the Algebraic Skill

- ▶ So we can factor \rightarrow what's the point?
- ▶ Now consider the expressions as functions
- ▶ Now $x^2 - x - 6$ becomes $f(x) = x^2 - x - 6$
- ▶ Now we can graph $f(x) = x^2 - x - 6$
- ▶ Now we can graph $f(x) = (x - 3)(x + 2)$
- ▶ So we have the two forms of a quadratic equations (standard & factored) \rightarrow So what?

Math 2 Honors – Santowski 9/16/2009

7

CONTEXT for the Algebraic Skill

Math 2 Honors – Santowski 9/16/2009

8

CONTEXT for the Algebraic Skill

- ▶ So there is a connection between the algebra and the graph
- ▶ This will allow us to simply re-express an equation in standard form as an equation in factored form
- ▶ We can now SOLVE a quadratic equation in the form of $0 = x^2 - x - 6$ by FACTORING and we can solve $0 = (x - 3)(x + 2)$
- ▶ So what are we looking for graphically → the roots, zeroes, x-intercepts

Math 2 Honors - Santowski 9/16/2009

9

Zero Product Property

- ▶ If the product of two numbers is 0, then it must follow that ???
- ▶ Mathematically, if $ab = 0$, then
- ▶ So, if $(x - r_1)(x - r_2) = 0$, then

Math 2 Honors - Santowski 9/16/2009

10

CONTEXT for the Algebraic Skill

- ▶ So SOLVING by factoring is now ONE strategy for solving quadratic equations
- ▶ Solve the following equations:
 - (a) $0 = x^2 + 5x + 6$
 - (b) $0 = x^2 - x - 6$
 - (c) $x^2 + 3x = -2$
 - (d) $-3x^2 = 24x + 45$
 - (e) $2y^2 - 2y - 60 = 0$
- ▶ (f) $x^2 = 15 - 2x$
- ▶ (g) Solve the system $\begin{cases} y = x^2 \\ y = 15 - 2x \end{cases}$

Math 2 Honors - Santowski 9/16/2009

11

CONTEXT for the Algebraic Skill

Math 2 Honors - Santowski 9/16/2009

12

(D) Factoring Methods – Trinomials $ax^2 + bx + c \rightarrow$ Decomposition

- ▶ What if the leading coefficient is NOT 1?
i.e. $3x^2 - 7x - 6$
- ▶ Consider the following EXPANSION:
 - ▶ $(4x - 3)(3x + 1) = 12x^2 + 4x - 9x - 3$
 - ▶ $(4x - 3)(3x + 1) = 12x^2 - 5x - 3$
- ▶ Point to note is how the term $-5x$ was “produced” \rightarrow from the $4x$ and the $-9x$
- ▶ NOTE the product $(4x)(-9x) \rightarrow -36x^2$
- ▶ NOTE the product of $(12x^2)(-3) \rightarrow -36x^2 \rightarrow (4x)(-9x)$
- ▶ COINCIDENCE? I think NOT!

Math 2 Honors – Santowski 9/16/2009

13

(D) Factoring Methods – Decomposition

- ▶ So let's apply the observation to factor the following:
 - ▶ (a) $6x^2 + 11x - 10$
 - ▶ (b) $8x^2 - 18x - 5$
 - ▶ (c) $9x^2 + 101x + 22$
 - ▶ (d) $2x^2 + 13x + 15$
 - ▶ (e) $3x^2 - 11x + 10$
 - ▶ (f) $3x^2 - 7x - 6$

Math 2 Honors – Santowski 9/16/2009

14

(E) Factoring Methods – Guess/Check

- ▶ As a valid alternative to the decomposition method, we can simply use a G/C method
- ▶ (a) $5x^2 - 17x + 6$
- ▶ (b) $6x^2 + 23x + 7$
- ▶ (c) $-36x^2 - 39x + 35$

Math 2 Honors – Santowski 9/16/2009

15

CONTEXT for the Algebra Skill

- ▶ Find the roots of the quadratic equations:
 - ▶ (a) $f(x) = 2x^2 + 13x + 15$
 - ▶ (b) $f(x) = 3x^2 - 11x + 10$
 - ▶ (c) $f(x) = 3x^2 - 7x - 6$
- ▶ OR
- ▶ Solve the quadratic equations:
 - ▶ (d) $0 = 6x^2 + 23x + 7$
 - ▶ (e) $0 = -36x^2 - 39x + 35$

Math 2 Honors – Santowski 9/16/2009

16

CONTEXT for the Algebra Skill

- ▶ Determine the flight time of a projectile whose height, $h(t)$ in meters, varies with time, t in seconds, as per the following formula: $h(t) = -5t^2 + 15t + 50$

Math 2 Honors - Santowski 9/16/2009

17

(F) "Special" Factors

- ▶ The expression $a^2 - b^2$ is called a difference of squares
- ▶ Factoring a "difference of squares" produces the factors $(a + b)$ and $(a - b)$
- ▶ Factor the following:
 - ▶ (a) $x^2 - 16$ (b) $4x^2 - 1$
 - ▶ (c) $121 - 16x^2$ (d) $x^4 - 49$
 - ▶ (e) $9x^2 - 1/9$ (e) $1/16x^2 - 3$

Math 2 Honors - Santowski 9/16/2009

18

CONTEXT for the Algebra Skill

- ▶ Given these "difference of square" quadratic expressions, let's make the graphic connection
- ▶ (a) $f(x) = x^2 - 16 = (x - 4)(x + 4)$
- ▶ (b) $f(x) = 4x^2 - 1 = (2x - 1)(2x + 1)$
- ▶ (c) $f(x) = 121 - 16x^2$ (d) $f(x) = x^4 - 49$
- ▶ (e) $f(x) = 9x^2 - 1/9$ (e) $f(x) = 1/16x^2 - 3$
- ▶ So its obviously easy to find their roots, but what else do these quadratic graphs have in common?

Math 2 Honors - Santowski 9/16/2009

19

CONTEXT for the Algebra Skill

- ▶ Given these "difference of square" quadratic expressions, let's make the graphic connection
- ▶ (a) Solve $0 = x^2 - 16$
- ▶ (b) Solve $0 = 4x^2 - 1$
- ▶ (c) Solve $0 = 121 - 16x^2$
- ▶ (d) Solve $0 = x^4 - 49$
- ▶ (e) Solve $0 = 9x^2 - 1/9$
- ▶ (f) Solve $0 = 1/16x^2 - 3$

Math 2 Honors - Santowski 9/16/2009

20

CONTEXT for the Algebra Skill

Math 2 Honors - Santowski 9/16/2009

21

(F) "Special" Factors

- ▶ The expression $a^2 \pm 2ab + b^2$ is called a "perfect square trinomial"
- ▶ Factoring a perfect square trinomial produces the factors $(a \pm b)$ and $(a \pm b)$ which can be rewritten as $(a \pm b)^2$
- ▶ Factor the following:
 - ▶ (a) $x^2 - 8x + 16$ (b) $4x^2 - 4x - 1$
 - ▶ (c) $121 - 88x + 16x^2$ (d) $x^4 - 14x^2 + 49$
 - ▶ (e) $9x^2 - 2x + 1/9$
- ▶ (e) Solve for b such that $1/16x^2 - bx + 3$ is a perfect square trinomial

Math 2 Honors - Santowski 9/16/2009

22

CONTEXT for the Algebra Skill

- ▶ Given these "perfect square" quadratic expressions, let's make the graphic connection
- ▶ (a) $f(x) = x^2 - 8x + 16 = (x - 4)(x - 4) = (x - 4)^2$
- ▶ (b) $f(x) = 4x^2 - 4x + 1 = (2x - 1)(2x - 1) = (2x - 1)^2$
- ▶ (c) $f(x) = 121 - 88x + 16x^2 = (11 - 4x)^2$
- ▶ (d) $f(x) = x^4 + 14x^2 + 49 =$
- ▶ (e) $f(x) = 9x^2 + 2x + 1/9 =$
- ▶ (f) $f(x) = 1/16x^2 - bx + 3 =$
- ▶ So its obviously easy to find their roots, but what else do these quadratic graphs have in common?

Math 2 Honors - Santowski 9/16/2009

23

CONTEXT for the Algebra Skill

Math 2 Honors - Santowski 9/16/2009

24

CONTEXT for the Algebra Skill

- ▶ Sasha wants to build a walkway of uniform width around a rectangular flower bed that measures 20m x 30m. Her budget is \$6000 and it will cost her \$10/m² to construct the path. How wide will the walkway be?

Math 2 Honors - Santowski 9/16/2009
