

## Lesson 22 – Solving Polynomial Equations

Math 2 Honors - Santowski

11/2/2010

Math 2 Honors - Santowski

1

## Lesson Objectives

- Mastery of the factoring of polynomials using the algebraic processes of long & synthetic division
- Mastery of the algebraic processes of solving polynomial equations by factoring (Factor Theorem)
- Investigate how equations can be factored and solved graphically, numerically, and by technology
- Reinforce the understanding of the connection between factors and roots

11/2/2010

Math 2 Honors - Santowski

2

## Fast Five

- Solve  $x^3 - x^2 - 14x + 24 = 0$ , knowing that  $x = -4$  is one of the solutions.

11/2/2010

Math 2 Honors - Santowski

3

## Fast Five – Graph of $P(x) = x^3 - x^2 - 14x + 24$

11/2/2010

Math 2 Honors - Santowski

4

## (A) Examples

- ex.1 Solve  $2x^3 - 9x^2 - 8x = -15$  and then show on a GDC
- ie. Solve the system 
$$\begin{cases} y = 2x^3 - 9x^2 - 8x \\ y = -15 \end{cases}$$
- ex 2. Solve  $2x^3 + 14x - 20 = 9x^2 - 5$  and then show on a GDC
- ie. Solve the system 
$$\begin{cases} y = 2x^3 + 14x - 20 \\ y = 9x^2 - 5 \end{cases}$$

11/2/2010

Math 2 Honors - Santowski

5

## (A) Examples - Solutions

- Solve  $2x^3 - 9x^2 - 8x = -15$  and then show on a GDC
- Now graph both
- $g(x) = 2x^3 - 9x^2 - 8x$  and then
- $h(x) = -15$  and find intersection
- Then graph:
- $f(x) = 2x^3 - 9x^2 - 8x + 15$

11/2/2010

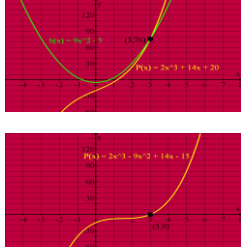

Math 2 Honors - Santowski

6

6

### (A) Examples - Solutions

- Solve  $2x^3 + 14x - 20 = 9x^2 - 5$  and then show on a GDC
- Explain that different solution sets are possible depending on the number set being used (real or complex)

11/2/2010 Math 2 Honors - Santowski 7

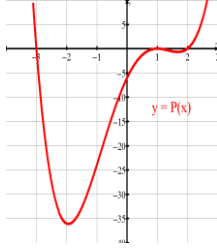

### (A) Examples

- Solve  $x^4 - x^3 - 7x^2 + 13x - 6 = 0$  then graph using roots, points, end behaviour. Approximate turning points, max/min points, and intervals of increase and decrease (HINT for domain of solution → use RRT}

11/2/2010 Math 2 Honors - Santowski 8

### (A) Examples - Solutions

- Solve  $x^4 - x^3 - 7x^2 + 13x - 6 = 0$
- Then graph using roots, points, end behaviour. Approximate turning points, max/min points, and intervals of increase and decrease.
- $P(x) = (x - 1)^2(x + 3)(x - 2)$

11/2/2010 Math 2 Honors - Santowski 9

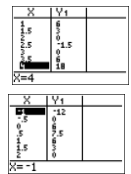

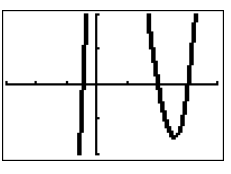

### (B) Solving & Factoring on the TI-84

- Factor & Solve the following:
  - $0 = 2x^3 - 9x^2 + 7x + 6$
  - $3x^3 - 7x^2 + 8x - 2 = 0$
  - $x^4 - x^3 - 7x^2 + 13x - 6 = 0$

11/2/2010 Math 2 Honors - Santowski 10

### (B) Solving & Factoring on the TI-84

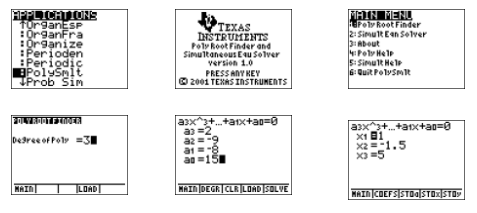

- Factor & Solve the following:
  - $0 = 2x^3 - 9x^2 + 7x + 6$  → roots at  $x = -0.5, 2, 3$  → would imply factors of  $(x - 2)$ ,  $(x - 3)$  and  $(x + 1/2)$  →  $P(x) = 2(x + 1/2)(x - 2)(x - 3)$
  - So when factored  $P(x) = (2x + 1)(x - 2)(x - 3)$

11/2/2010 Math 2 Honors - Santowski 11

### (C) Solving & Factoring on the TI-84

- Solve  $2x^3 - 9x^2 - 8x = -15$  turn it into a "root" question → i.e Solve  $P(x) = 0$  → Solve  $0 = 2x^3 - 9x^2 - 8x + 15$

11/2/2010 Math 2 Honors - Santowski 12

### (D) Examples - Applications

- You have a sheet of paper 30 cm long by 20 cm wide. You cut out the 4 corners as squares and then fold the remaining four sides to make an open top box.
  - (a) Find the equation that represents the formula for the volume of the box.
  - (b) Find the volume if the squares cut out were each 2 cm by 2 cm.
  - (c) What are the dimensions of the squares that need to be removed if the volume is to be 1008 cm<sup>3</sup>?

11/2/2010

Math 2 Honors - Santowski

13

### (D) Examples - Applications

- The volume of a rectangular-based prism is given by the formula  $V(x) = -8x + x^3 - 5x^2 + 12$ 
  - (i) Express the height, width, depth of the prism in terms of  $x$
  - (ii) State any restrictions for  $x$ . Justify your choice
  - (iii) what would be the dimensions on a box having a volume of 650 cubic units?
  - (iv) now use graphing technology to generate a reasonable graph for  $V(x)$ . Justify your window/view settings

11/2/2010

Math 2 Honors - Santowski

14

### (E) Examples - Applications

- The equation  $p(m) = 6m^5 - 15m^4 - 10m^3 + 30m^2 + 10$  relates the production level,  $p$ , in thousands of units as a function of the number of months of labour since October,  $m$ .
- Use graphing technology to graph the function and determine the following:
  - maximums and minimums. Interpret in context
  - Intervals of increase and decrease. Interpret
  - Explain why it might be realistic to restrict the domain. Explain and justify a domain restriction
  - Would  $0 \leq m \leq 3$  be a realistic domain restriction?
- Find when the production level is 15,500 units (try this one algebraically as well)
