Lesson Objectives

- The next class of functions that we will investigate is the rational functions. We will explore the following ideas:
- The basic rational function, $y = 1/x$
- Definition of rational function.
- Apply our analysis of the basic rational function to rational functions

2

Math 2 Honors - Santowski

11/9/2010

(A) The Basic Rational Function: $y = 1/x$

- Sketch the graph of $f(x) = 1/x$ and list a table of values
- Analyze this parent function for: domain, range, intercepts, intervals of increase/decrease, extrema, end behaviour
- By looking at the **equation** $f(x) = 1/x$, determine the domain.
- By looking at the **graph** of $f(x) = 1/x$, determine the range.

3

Math 2 Honors - Santowski

11/9/2010

(A) The Basic Rational Function: $y = 1/x$

-
- x y
- -5.00000 -0.20000
- -4.00000 -0.25000
- -3.00000 -0.33333
- -2.00000 -0.50000
- -1.00000 -1.00000
- 0.00000 undefined
- 1.00000 1.00000
- 2.00000 0.50000
- 3.00000 0.33333
- 4.00000 0.25000
- 5.00000 0.20000

4

Math 2 Honors - Santowski

11/9/2010

(A) The Basic Rational Function: $y = 1/x$

- The basic features of this basic rational function are:
- (a) domain →
- (b) range →
- (c) intercepts →
- (d) intervals of increase/decrease →
- (e) extrema →
- (f) end behaviour →
- (g) NEW IDEA → DISCONTINUITIES

5

Math 2 Honors - Santowski

11/9/2010

(A) The Basic Rational Function: $y = 1/x$

- The basic (untransformed) rational function is $f(x) = 1/x$.
- Complete the following table of values for y if $x = \{0.0001, 0.001, 0.01, 0.1, 0.1, 1, 10, 100, 1000, 10000\}$.

x	10000	1000	100	10	1	0.1	0.01	0.001	0.0001
y									

6

Math 2 Honors - Santowski

11/9/2010

(A) The Basic Rational Function: $y = 1/x$

- The statement $x \rightarrow \infty$ is read "x approaches infinity".
- To approach a value means to get close to the value but not necessarily equal to the value.
- From the table of positive x -values, what value does y approach as $x \rightarrow \infty$?
- From the table of negative x -values, what value does y approach as $x \rightarrow -\infty$?
- The statement $x \rightarrow 0$ is read "x approaches zero".
- From the table of positive x -values, what value does y approach as $x \rightarrow 0$?

7

(A) The Basic Rational Function: $y = 1/x$

- Use the graph of $f(x) = 1/x$ to evaluate the following function behaviours:

- (a) as $x \rightarrow +\infty$, $y \rightarrow$????
- (b) as $x \rightarrow \infty$, $y \rightarrow$????
- (c) as $x \rightarrow 0^+$, $y \rightarrow$????
- (d) as $x \rightarrow 0^-$, $y \rightarrow$????
- (e) as $x \rightarrow 2$, $y \rightarrow$????
- (f) as $x \rightarrow \frac{4}{3}$, $y \rightarrow$????

8

Math 2 Honors - Santowski

(B) Asymptotic Behaviour:

- Asymptotic Behaviour: The behaviour of the y - value of graphs to reach bounded values (limits) or to grow unboundedly (to approach infinity) is called "Asymptotic Behaviour".
- Asymptotes are boundary lines (or curves) that act as limiters or attractors of the shape of the graph.
- Write the equation(s) of the asymptote(s) of $y = 1/x$
- The asymptotes of $y = 1/x$ are referred to as vertical and non-vertical \rightarrow explain why

9

(C) Rational Functions

- Just as we saw how the Division Algorithm for integers applies to polynomials or functions, the definition of rational numbers can be extended to functions.
- A rational function is any function of the form $r(x) = n(x)/d(x)$, where $n(x)$ and $d(x)$ represent numerator and denominator polynomials.
- Rational functions then are RATIOS of polynomials.

10

Math 2 Honors - Santowski

11/9/2010

(D) Exercises

- Analyze the following rational functions:

$$\begin{array}{lll} \text{(a)} y = \frac{1}{x} & \text{(b)} y = \frac{1}{x-3} & \text{(c)} y = -\frac{4}{x-3} \\ \text{(d)} y = \frac{x+2}{x^2-4} & \text{(e)} y = \frac{x-2}{x+1} & \text{(f)} y = \frac{3}{5-2x} \\ \text{(g)} y = \frac{2x+2}{x^2-3x-4} & \text{(h)} y = \frac{x+3}{x^2-3x-4} & \text{(i)} y = -\frac{1-x^2}{x} \\ \text{(j)} y = \frac{1}{x^2} & \text{(k)} y = \frac{6}{4-2x^2} & \text{(l)} y = \frac{x^2+1}{x^2-x-2} \end{array}$$

11

Math 2 Honors - Santowski

11/9/2010

(E) Examples

- Analyze the following rational functions:

$$\begin{array}{lll} \text{(a)} y = \frac{1}{x} & \text{(b)} y = \frac{1}{x-3} & \text{(c)} y = -\frac{4}{x-3} \\ \text{(d)} y = \frac{x+2}{x^2-4} & \text{(e)} y = \frac{x-2}{x+1} & \text{(f)} y = \frac{3}{5-2x} \\ \text{(g)} y = \frac{2x+2}{x^2-3x-4} & \text{(h)} y = \frac{x+3}{x^2-3x-4} & \text{(i)} y = -\frac{1-x^2}{x} \\ \text{(j)} y = \frac{1}{x^2} & \text{(k)} y = \frac{6}{4-2x^2} & \text{(l)} y = \frac{x^2+1}{x^2-x-2} \end{array}$$
