

Investigation

- Draw the curve of $f(x) = x x^2$ between x = 0 and x = 1
- \blacktriangleright Draw a rectangle whose height is $f(x_i)$ and whose width is Δx
- Visualize what happens to this rectangle if it is rotated around the x-axis. Tell me what "shape" results
 Tell me what the idea of "rectangle is perpendicular to the
- rotation axis" means
- Now visualize what happens to this rectangle if it is rotated around the y-axis. Tell me what "shape" results
 Tell me what the idea of "rectangle is parallel to the
 - rotation axis" means

Calculus - Santowski 4/22/2017

(A) Example #1

- We will work with the example of $y = x x^2$ between x = 0 and x = 1 and rotating around the yaxis
- This example is explained and visualized in the following link from Visual Calculus:
- http://archives.math.utk.edu/visual.calculus/5/volume s.6/index.html

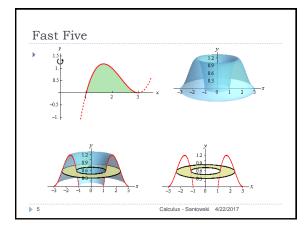

▶ 3

> 2

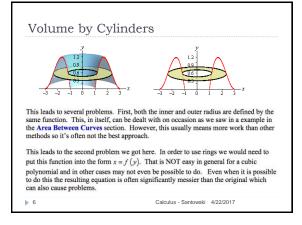

Fast Five

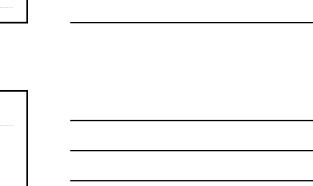

▶ 4

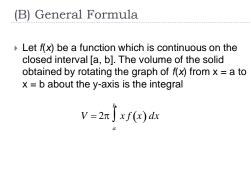

- Graph $y = (x-1)(x-3)^2$ on the interval x = 0 to x = 4
- Shade in the region bounded the x-axis and the curve and determine the volume of revolution formed when the region is rotated around the y-axis

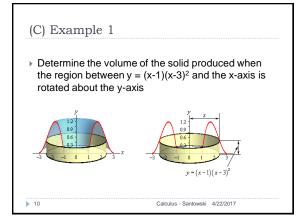

Examples

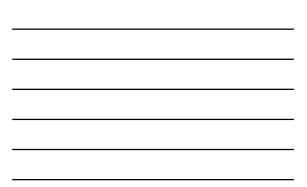

▶ 8

- The following in class examples are from the following web site, which you should visit if you do not understand our in-class discussion:
- http://tutorial.math.lamar.edu/Classes/Calcl/Volume WithCylinder.aspx

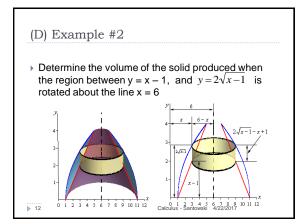

▶ 9

Calculus - Santowski 4/22/2017

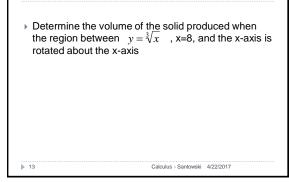

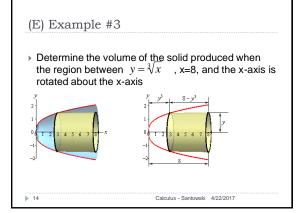

(D) Example #2 • Determine the volume of the solid produced when the region between y = x - 1, and $y = 2\sqrt{x-1}$ is rotated about the line x = 6

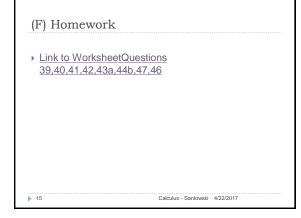

(E) Example #3

Further Examples - Day 2

▶ Ex 1.

- > The base of a solid is a region between the parabolas $x = y^2$ and $x = 3 - 2y^2$. Find the volume of the solid given that the cross section perpendicular to the x-axis are:
- (a) rectangles of height h
- (b) equilateral triangles
- (c) isosceles right triangles, hypotenuse on the xy plane

Calculus - Santowski 4/22/2017

▶ 16

Further Examples - Day 2

▶ Ex 2.

▶ 17

- Find the volume enclosed by the surface obtained by revolving the ellipse $b^2x^2 + a^2y^2 = a^2b^2$ about the xaxis.
- (a) Use the method of discs
- (b) Use the method of cylinders

Calculus - Santowski 4/22/2017

Further Examples – Day 2 ▶ Ex 3. $\begin{cases} \sqrt{3x}, & 0 \le x < 1\\ \sqrt{4-x^2}, & 1 \le x \le 2 \end{cases}$ • Let f(x) =• And let Ω be the region between the graph of y = f(x) and the x-axis (a) Revolve Ω about the y-axis and express the volume of the resulting solid as an integral in x (b) Revolve Ω about the y-axis and express the volume of the resulting solid as an integral in y (c) Calculate the volume by evaluating one of these ⊾ integrals ▶ 18

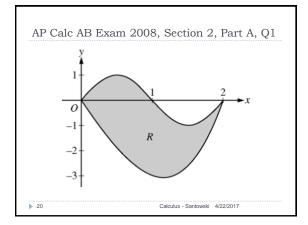

Further Examples - Day 2

▶ Ex 4.

• The region Ω in the first quadrant bounded by the parabola $y = r^2 - x^2$ and the co-ordinate axis is revolved around the *y*-axis. The resulting solid is called a paraboloid. A vertical hole of radius *a*, where *a* < *r*, centered along the *y*-axis is drilled through the paraboloid. Find the volume of the solid that remains by:

Calculus - Santowski 4/22/2017

- (a) integrating wrt x
- (b) integrating wrt y

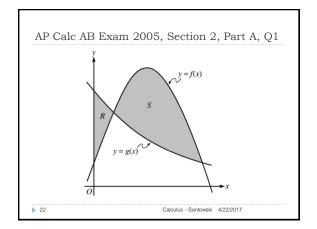

AP Calc AB Exam 2008, Section 2, Part A, Q1

- > Let R be the region bounded by the graphs of y = sin(πx) and y = x³ 4x as shown in the figure above.
- (a) Find the area of R.

21

- (b) The horizontal line y = 2 splits the region R into two parts. Write, but do not evaluate, an integral expression for the area of the part of R that is below this horizontal line.
- (c) The region R is the base of a solid. For this solid, each cross section perpendicular to the x-axis is a square. Find the volume of this solid.
- (d) The region R models the surface of a small pond. At all points in R at a distance x from the y-axis, the depth of the water is given by h(x) = 3 - x Find the volume of water in the pond.

AP Calc AB Exam 2005, Section 2, Part A, Q1
Let f and g be the functions given by f(x) = ¹/₄ + sin(πx) and g(x) = 4⁻². Let R be the shaded region in the first quadrant enclosed by the y-axis and the graphs of f and g, and let S be the shaded region in the first quadrant enclosed by the graphs of f and g, as shown in the figure above.
(a) Find the area of R.
(b) Find the area of the solid generated when S is revolved about the horizontal line y = -1.
