Solving Proportions Worksheet

Name:
Date: $\qquad$

Each problem could be set up this way:

1. Write the proportion.

$$
\frac{8}{3}=\frac{192}{n}
$$

2. Write the cross products

$$
8 \cdot n=192 \cdot 3
$$

3. Multiply

$$
8 n=576
$$

4. Undo multiplication by using $\underline{8 n}=576$
division
88
5. Divide

$$
n=72
$$

Solve each proportion. Be sure to set it up the correct way and show all work.

1. $\frac{4}{9}=\frac{10}{x}$
2. $\frac{5}{2}=\frac{x}{6}$
3. $\frac{5}{2}=\frac{2}{x}$
4. $21=\underline{x}$
2718
5. $\underline{15}=20$
$21 y$
6. $\underline{b}=\underline{39}$
$26 \quad 9$
7. $\underline{h}=0.435$
8. $4.56=\frac{70}{w}$
9. $0.65=J$
15
10. $\frac{350}{p}=0.25$
11. $\frac{q}{1134}=0.95$
12. $1.75=\frac{z}{104}$

The Right Triangle Trigonometric Ratios - Although we won't prove this fact until a future geometry course, all right triangles that have a common acute angle are similar. Thus, the ratios of their corresponding sides are equal. A very long time ago, these ratios were given names. These trigonometric ratios (trig ratios) will be introduced through the following exercises, each of which refer to the diagram below.

In a right triangle:

$$
\text { tangent of an angle }=\frac{\text { leg opposite of the angle }}{\text { leg adjacent to the angle }}
$$

Exercise \#3: $\tan A=\quad \tan C=$

$$
\text { sine of an angle }=\frac{\text { leg opposite of the angle }}{\text { hypotenuse }}
$$

Exercise \#4: $\sin A=\quad \sin C=$

$$
\text { cosine of an angle }=\frac{\text { leg adjacent to the angle }}{\text { hypotenuse }}
$$

Exercise \#5: $\cos A=\quad \cos C=$

## A Helpful Mnemonic For Remembering the Ratios:

## SOH-CAH-TOA

Sine is Opposite over Hypotenuse - Cosine is Adjacent over Hypotenuse - Tangent is Opposite over Adjacent

Exercise \#3: Find each of the following ratios for the right triangle shown below.
(a) $\sin A=$
(b) $\tan B=$
(c) $\cos A=$
(d) $\tan A=$
(e) $\cos B=$
(f) $\sin B=$

$\qquad$

## Similar Right Triangles - Introduction to Trigonometry Algebra 1 Homework

## Skills

For problems $1-6$, use the triangle to the right to find the given trigonometric ratios.

1. $\cos \mathrm{N}=$
2. $\sin \mathrm{N}=$
3. $\tan \mathrm{N}=$

4. $\sin \mathrm{P}=$
5. $\cos \mathrm{P}=$
6. $\tan \mathrm{P}=$
7. Given the right triangle shown, which of the following represents the value of $\tan A$ ?
(1) $\frac{25}{24}$
(3) $\frac{7}{24}$
(2) $\frac{24}{7}$
(4) $\frac{24}{25}$

8. In the right triangle below, $\cos Q=$ ?
(1) $\frac{12}{5}$
(3) $\frac{12}{17}$
(2) $\frac{5}{12}$
(4) $\frac{12}{13}$

## Trigonometric Ratios

Name $\qquad$
Date $\qquad$ Period $\qquad$
Find the value of each trigonometric ratio.

1) $\tan Z$

2) $\cos C$

3) $\sin C$

4) $\cos A$

5) $\sin Z$

6) $\cos Z$

7) $\tan X$

8) $\sin A$

9) $\sin C$

10) $\tan C$

## Find the value of each trigonometric ratio to the nearest ten-thousandth.

11) $\cos Z$

12) $\cos C$

13) $\tan A$

14) $\tan C$

15) $\sin Z$

16) $\sin 48^{\circ}$
17) $\cos 61^{\circ}$

## Critical thinking questions:

23) Can the sine of an angle ever equal 2 ? Why or why not?
24) $\sin Z$
25) $\tan X$

26) $\cos 51^{\circ}$
27) $\sin x=\frac{1}{3}$

Find $\cos x$.

## Using Trigonometry to Solve for Missing Sides Algebra 1 Homework

## Skill

In problems 1 through 3, determine the trigonometric ratio needed to solve for the missing side and then use this ratio to find the missing side.

1. In right triangle $A B C, m \angle A=58^{\circ}$ and $A B=8$. Find the length of each of the following. Round your answers to the nearest tenth.
(a) $B C$
(b) $A C$

2. In right triangle $A B C, m \angle B=44^{\circ}$ and $A B=15$. Find the length of each of the following. Round your answers to the nearest tenth.
(a) $A C$
(b) $B C$

3. In right triangle $A B C, m \angle C=32^{\circ}$ and $A B=24$. Find the length of each of the following. Round your answers to the nearest tenth.
(a) $A C$
(b) $B C$

4. Which of the following would give the length of hypotenuse $\overline{P R}$ in the diagram below?
(1) $8 \cos \left(24^{\circ}\right)$
(3) $8 \tan \left(24^{\circ}\right)$
(2) $\frac{8}{\cos \left(24^{\circ}\right)}$
(4) $\frac{8}{\tan \left(24^{\circ}\right)}$

## Applications

5. An isosceles triangle has legs of length 16 and base angles that measure $48^{\circ}$. Find the height of the isosceles triangle to the nearest tenth. Hint - Create a right triangle by drawing the height.

6. Carlos walked 10 miles at an angle of $20^{\circ}$ north of due east. To the nearest tenth of a mile, how far east, $x$, is Carlos from his starting point?

7. Students are trying to determine the height of the flagpole at Arlington High. They have measured out a horizontal distance of 40 feet from the flagpole and site the top of it at an angle of elevation of $52^{\circ}$. What is the height, $h$, of the flagpole? Round your answer to the nearest tenth of a foot.
