

## IM1 Problem Set 14 - Daily Tasks

Task 1	Task 2	DC
Put solutions to problems from the previous Problem Set on the board	Discuss all problems and come to a consensus. Record solutions in your notebooks and present solutions.	DC

### Problem Set 14

<b>14.1</b>	<p>Solve the following equations:</p> <p>a. <math>\frac{2x+3}{2} = 5</math>      b. <math>\frac{3x}{2} - 1 = 8 + x</math>      c. <math>\frac{x}{3} + \frac{2}{4} = x - 1</math></p>
<b>14.2</b>	<p>Evaluate the following expressions:</p> <p>a. <math>-\frac{3}{8} + 1\frac{3}{4} + (-\frac{5}{12})(-\frac{8}{15})</math>      b. <math>2^2 + 2^1 + 2^0 + (2^{-1} \times 2^{-2})</math>      c. <math>(\frac{15}{16}) \div (-1\frac{1}{24})</math></p>
<b>14.3</b>	<p>My house in Canada was worth \$250,000 in 2002 and was worth \$355,000 in 2010. Let's assume that the value of my house has increased by a constant rate each year.</p> <ol style="list-style-type: none"> <li>What is the value of my house in 2018? In 1998?</li> <li>Write an equation that models the value of my house compared to the number of years since 2000.</li> <li>Predict in what year the value of my house first exceeds \$450,000.</li> <li>What does the slope of the line mean in the context of this problem?</li> </ol>
<b>14.4</b>	<p>A car is traveling at a constant speed. It leaves Marsa Alam at 12:00 noon. After 3 hours, they are 350 km from home and after 5 hours, they are 130 km from their home.</p> <ol style="list-style-type: none"> <li>Write a linear equation to represent this distance-time relationship.</li> <li>What do the slope and the y-intercept mean in this context?</li> <li>At what time do they get home?</li> </ol>
<b>14.5</b>	<p>Determine the area and perimeter of these composite shapes.</p> <div style="display: flex; justify-content: space-around; align-items: center;">   </div>

14.6

Here is a graph showing 2 lines. Determine the equation of each line and write your final answers in slope-intercept form as well as standard form.

14.7

Memphis and Rocco collected the following data from a science experiment.

Temperature °C	3	15	20	25	32	34
Volume ( mL )	3.84	4.01	4.08	4.18	4.33	4.40

- Graph the data. Put the temperature (in °C) on the  $x$ -axis and the volume on the  $y$ -axis.
- Draw the line of best fit - the line that best represents the trend of your data.
- Determine the equation of your line of best fit.
- What does the  $y$ -intercept represent?
- Determine the  $x$ -intercept. What does it represent?

14.8

Jennifer is playing darts. She throws two darts aiming for a Bullseye. The probability Jennifer hits the Bullseye on her first throw is  $\frac{1}{4}$ . The probability she hits the Bullseye on her second throw  $\frac{1}{3}$ .

- Complete the tree diagram.
- Work out the probability Jennifer hits the Bullseye at least once.
